

Homework

- Write a C++ program (with the main file and class files) that includes:
 - constant member functions,
 - passing by reference (defined as constant)
 - constant objects,
 - invoking constant member functions on constant objects,
- Submit the whole NetBean project directory. You need to ensure that NetBeans can open your project, compile, and run. Your homework will not be graded if it does not compile.
- Also submit a word document explaining which line of your code in which file reflects the above 4 requirements.
- Your submission should not be the same as the example program.
